

Dr. Yankelove performed cataract surgery and at the same time did the implants for my corrective vision. He explained the cataract surgery procedure and that some type of implant needed to be inserted. My confidence in Dr. Yankelove and his staff made my decision very easy.

On 7/15/08, he inserted ReSTOR implant in my right eye and 7/29/08, he inserted AMO on my left eye. One for close up vision and the other for far away vision. I chose to have the implants surgically input by Dr. Yankelove, and have not regretted one day since the surgeries.

The surgeries were very scary at first, thinking that I would be awake during the whole process, but Dr. Yankelove spoke to me during the whole process and put my fears at ease. I felt no pain what so ever. His staff was so reassuring and kind throughout the process.

I did experience Halos in my vision at first, especially at night time while I was driving. He said my vision would improve and it has tremendously.

I would recommend this procedure to anyone that doesn't want to wear eye glasses for the rest of their lives. I work on the computer 3 times a week all day long, and it's been one of the best blessings not to have to wear eye glasses.

Thanks again, Dr. Yankelove to you and your caring staff of employees.

Patricia F.
